IC-72-0208

21 March 1972

MEMORANDUM FOR: Mr. Tweedy

SUBJECT : CIA Input to CIRIS for Calendar Year 1972

1. The attached memorandum from [] Chief, Budget Management Staff, CIA/OPPB was delivered to me today.

25X1

2. It says in summary that the proposed position of Mr. Colby and OPPB relative to CIRIS submits from CIA in calendar year 1972 is as follows:

(a) CIA does not wish to submit any data at a level below that of the aggregate for the total agency.

(b) CIA does not wish to submit, even at the aggregate Agency level, detailed information on subject targeting. The CIA attitude toward geographic targeting is not wholly clear but it appears to be similar to subject targeting. CIA will identify at the aggregate level its resources related to mission and function, sensor and platform.

(c) For the data CIA is willing to submit, it desires to report on fiscal data for FYs 72, 73 and 74, but functionally oriented data only on FYs 72 and 73.

3. This memorandum came to me as a surprise because I have not had any discussions with [] on the CIA inputs. My only point of contact has been [] who is the CIA CIRIS liaison representative. My talks with him have been limited to advising him that Mr. Tweedy's guidance to me has been that DCI/IC desired to deal with the DoD CIRIS participation before turning to CIA and State. Therefore, I had asked [] to relay to Chuck Briggs that we would prefer to delay for a bit any discussions with him.

25X1

4. Undoubtedly, however, CIA has their own channels for taking a reading on discussions with DoD. [] has had a copy of the proposed CIRIS-72 annexes, since we have drawn on his technical opinions in preparing some of the materials that were included. I presume that OPPB has unilaterally proceeded to discuss this matter in house, with the results indicated in the attached memorandum.

5. When I received the attached today, I said that I would forward it to D/DCI/IC, and would refrain from making comments to [redacted] since this involves a matter of policy that would require study.

25X1

6. If the CIA view as reflected herein were to prevail, it would be more difficult to persuade Defense to provide a more detailed input to a DCI/IC data base, whether or not it were within the context of the proposed CIRIS-72 guidance and instructions.
